The like provision for such as return to society cannot be less needful. Bishop Butler, one of the writers cited in the note, affirms that it is much more so, "since it must be acknowledged, of greater consequence in a religious, as well as civil respect, how persons live than how they die."

The separation I am pleading for, especially at night, would prevent escapes, or make them very difficult: for that is the time in which they are generally planned, and effected. This also would prevent their robbing one another in the night. Another reason for separation is, that it would free gaolers from a difficulty of which I have heard them complain: they hardly know where to keep criminals admitted to be evidence for the king: these would be murdered by their accomplices if put among them; and in more than one prison, I have seen them, for that reason, put in the women's ward.

Where there are opposite windows they should have shutters; but these should be open all day. In the men-felons' ward the windows should be six feet from the floor; there should be no glass; nor should the prisoners be allowed to stop them with straw, etc.

The women-felons' ward should be quite distinct from that of the men[1]; and the young criminals from old and hardened offenders. Each of these three classes should also have their day-room or kitchen with a fireplace; and their court and offices all separate.

Every court should be paved with flags or flat stones for the more convenient washing it; and have a good pump, or water laid on; both if possible: and the pump and pipes should be repaired as soon as they need it; otherwise the gaols will soon be offensive and unwholesome: as I have always found them to be in such cases. A small stream constantly running in the court is very desirable. In a room or shed near the pump or pipe, there should be a commodious bath,[2] with steps (as there is in some county hospitals) to wash prisoners that come in dirty, and to induce them afterwards to the frequent use of it.[3]

[1] By an act made in Ireland, third of his present Majesty, it is enacted, "That in all gaols hereafter to be built, there may be distinct apartments for the men and women; and that all gaolers, whose gaols will at present admit of such a distinction, may be obliged to separate and keep apart the different sexes."

[2] Fourteenth George III, cap. xliii.

[3] I might mention as an evidence of the advantage of baths in prisons, that I have known instances where persons supposed to be dead of the gaol-fever, and brought out for burial; on being washed with cold water, have shown signs of life, and soon after recovered. Even persons with the smallpox have found advantage by the cold bath. See some remarkable instances in the appendix to Dr. Watson's *Account of a Series of Experiments*.

It should be filled every morning, and let off in the evening through the sewers into the drains. There should also be a copper in the shed, to heat a quantity of water sufficient to warm that in the bath; for washing those that are sickly. There should likewise be an oven: nothing so effectually destroys vermin in clothes and bedding, nor purifies them so thoroughly when tainted with infection, as being a few hours in an oven moderately heated.

The infirmary or sick wards should be in the most airy part of the court, quite detached from the rest of the gaol, and raised on arcades. These rooms should never be without crib beds and bedding. In the middle of the floor of each room there should be a grate of twelve or fourteen inches square, for a current of air[1]; covered with a shutter or hatch at night. The same contrivance might also be convenient in the other wards. Besides the grate, it may be necessary to have in the wards of the infirmary, hand ventilators to freshen them every day. This machine is of excellent use when most wanted, and when the wind or sail-ventilator is of no service, that is, in calm weather. Dr. Hales (on the subject, p. 12) shows that it will supply seventy-five tons of air in a minute. But on further observation, I am persuaded that ventilators are of little use in those gaols, where there are no dungeons; for if they have courts, and the rooms are a proper size, and have apertures, and are kept clean; and also lime-whited twice a year, there will be no danger of infectious disorders.

The sewers or vaults of all prisons should be in the courts, and not in the passages, and (like those in the colleges) close boarded between the seats up to the ceiling, the boards projecting ten inches before each seat.

The infirmary and sheds will not render the court unsafe, provided the walls have parapets, or small *chevaux de frise*.

Debtors and felons should have wards totally separate: the peace, the cleanliness, the health and morals of debtors cannot be secured otherwise. The act twenty-second and twenty-third Charles II, chapter xx, requires this separation at night; that debtors may not be disturbed by the curses and other profane language of felons: "Be it enacted—That they shall be put, kept, and lodged separate and apart one from another,

[1] Dr. Lettsom's successful method has proved the benefit of fresh air in putrid fevers. See his *Medical Memoirs*, pp. 19, 57, 58, 62, etc. A putrid fever was lately in the poor-house at Yarmouth, but by the airiness of the situation was so mild, that many of the patients walked out with the spots on them.
